

## Section 4.1

$$\begin{aligned} \#23) \quad P &= \frac{\text{at least 1 B \& at least 1 W}}{C(10, 3)} \\ &= \frac{(1W \& 2B) \text{ or } (2W \& 1B)}{C(10, 3)} \\ &= \frac{C(4, 1) \cdot C(6, 2) + C(4, 2) \cdot C(6, 1)}{C(10, 3)} \end{aligned}$$

## Section 4.2

$$\begin{aligned} \#31) \quad P(A) &= 0.25 & P(A \cup B) &= 0.45 \\ P(B) &= X \end{aligned}$$

a) Disjoint  $\rightarrow$   $P(A \cup B) = P(A) + P(B) - P(A \cap B)$   
 $0.45 = 0.25 + X - \phi$   
 $X = 0.2$

b) Indep  $\rightarrow$   $0.45 = 0.25 + X - (0.25)(X)$   
 $0.45 = 0.25 + 0.75X$   
 $0.2 = 0.75X \Rightarrow X = 0.267$

c) A is in B

$$\begin{aligned} 0.45 &= 0.25 + X - A \cap B \\ 0.45 &= 0.25 + X - 0.25 \\ X &= 0.45 \end{aligned}$$

4.3

# 1, 3)  
Tree

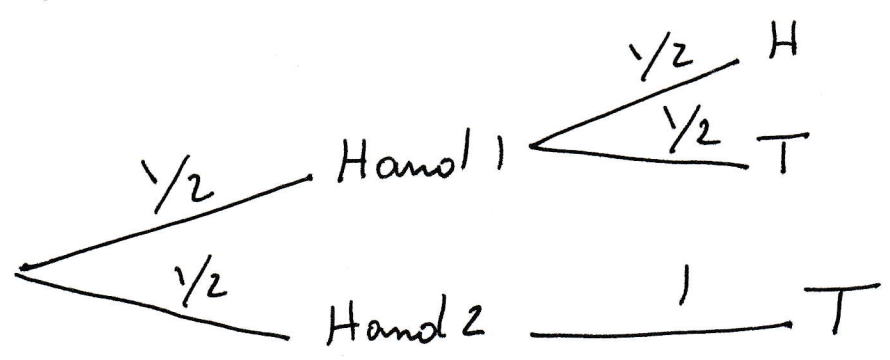

# 11)

$$P(T|L) = \frac{(90)(5)}{(10)(75) + (90)(5)}$$

# 21)

$$P(\text{Hand 2} | T) = \frac{\frac{1}{2}}{\frac{1}{4} + \frac{1}{2}}$$
